# SCOPE OF WORK AERIAL FIBER

We are going to connect offices in Bhubaneswar and Cuttack cities through our own optical fiber. BA should be responsible for optical fiber cable laying through aerial route by the help of our electric poles (HT/ LT). BA should start Optical fiber connectivity as per our existing network connectivity. Through this aerial path many offices are to be connected with this connectivity. List of offices provided at Annexure-VII

- I. **Route Survey:** The route should be inspected before the actual installation of optical fiber cables. Survey of the aerial route should be carried out pole by pole. Route survey should be complete within 5 working days after release of the RO.
- II. Insulator should be provided for GI wire on both side of each post While drawing aerial OF cable through electricity posts. No fiber in the cable shall have any joint
- III. Over Head Alignment: Alignment should be straight between two poles. No pole is missing in the Aerial route. Cable splices or joints inside the joint enclosure (Bamboo Type). Joint enclosure should mount with this pole. Ensure that no Electrical work not hampered. In unavoidable case this may be relaxed.
- IV. LINE DIAGRAM: A line diagram should be prepared to mark the poles & the actual distance between the poles in a splice section (Normally 17 poles per km are recommended for ADSS)
- V. It is necessary to keep the clear head way (Ground clearance) of 12 to 15 feet in a section at the Lowest point of the section. A complete line diagram should be prepared i.e. from station A to station B. The number of road crossings, canals or nallahs, should be clearly marked in the route diagram
- VI. Line diagram for OH laid cable, with details like, Length of total OH cable, tapping point and Termination Point of OH cable, Fiber Utilization of that cable, alignment details, coiling, Marking of Poles.
- VII. Each major points (Tapping point, Splitter Locations, Posts/ Poles, sub end etc) and Tracking details of each OH route to be provided with latitude & longitude details. Location of Coiling and tracking /logging details of each route is to be done as per the instructions by TPCODL.
- VIII. **ENTRY OF THE O.F. CABLE IN THE BUILDING:** Normal methods for leading in and precautions recommended for leading-in of the optical fiber cable should be followed. A conduit pipe should be laid for leading-in the O.F. cable Inside the building

# PREPARATION:

1) Before the installation the O.F. cable should be tested by physical verification.

2) Each pole should be checked for cable space and its strength.

3) The Aerial Optical fiber Cable is recommended to be installed on the outermost hole of bracket on the poles.

4) Use the strong and height poles for clear ground clearance and strength as per the field conditions.

5) Provide ground clearance of 12 feet in non-obstructing areas. Raise the height to minimum 20 feet at all the road crossings if geographical condition satisfies. otherwise raise heights as per the field conditions.

6) Maintain the alignment as straight as possible.

**CALCULATION OF SECTION LENGTH:** Aerial O.F. cable is supplied and installed as per TEC GR in a length of 2 Kms + 10%. To arrive at the section length and allocating a particular reel of the cable to a particular section following consideration are required. Looping/Coiling: The BA should create coiling the fiber cable as per the industry practice to handle future requirement and unforeseen situations. Extra spare cable for coiling at the splice location (20 meters).

- IX. The optical aerial cable must be erected and clamped to the bracket/accessories. The quality and standard of material supplied by the contractor should be got approved by the competent authority designated by TPCODL. The aerial cable must be terminated properly in each TPCODL offices.
- X. The aerial optical cable must be spliced using optical splicing machine. The splicing machine and kit is to be arranged by the contractor.
- XI. After the completion of work contractor has to ensure the quality and performance of the cable and work. The attenuation of every fiber of the newly laid cable by the BA should be tested at each offices one by one at the presence of designated TPCODL personnel.
- XII. The contractors shall transport (including loading and unloading) all equipment to the site work. The contractor shall provide at his own cost all tools, plants, appliances, implements etc. required for proper execution of work.
- XIII. Any loss or damage to TPCODL as a result of non-observance of Government rules and regulations during the execution of the contract should be compensated by the contractor within the stipulated time. If the contractor is responsible for the delay in execution of the work, he will be charged 0.5% of total amount of work/ per week. Penalty shall be applied as per the penalty clause.
- XIV. The contractor shall not assign or sublet in full or any part of the contract.
- XV. For implementation of the secondary (protection) route, the contractor shall carry out the work at the same rates as that of for the Primary route.

# XVI. SCOPE OF THE WORK FOR MAINTENANCE OF OVERHEAD OPTICAL FIBER CABLE

- 1. Localizing the cable fault and drawing the cable at sufficient height through posts to join together. The extra cable required for jointing the cable to be provided by BA.
- 2. Splicing of fibers, closing of joints with necessary joint closure, end to end fiber testing and putting through the system. During system test and its restoration, it may be required to put contractor's personnel at the other end of the link for system testing purposes.
- 3. Re-shackling / tightening of sagging lines, including erection of AB posts wherever required.
- 4. All testing instruments, tools and machines required for completing the work, including splicing work, should be arranged by the BA. TPCODL is not liable to provide any tools or machinery for executing the work.
- 5. Tents, Road-block signals and warning boards supplied by the BA must be erected wherever and whenever required.
- 6. The BA must take with him enough quantity of required consumable materials for executing the work.
- 7. The splicing work, if any related to the main line of the cable, shall be done after approval of designated TPCODL officers.
- 8. ROW and other Local issues if any is to be done should be carried out by the BA and shall be deemed to be included in price quoted. Time required to take approvals from GOVT. authorities(BMC) within 7 working days after submitting the survey report.
